FAQ

How do I sign up to submit my feed to Zillow?

Go to www.zillowfeeds.com, fill out the form, and enter the feed URL, if you have it. Then click “Submit.” We will contact you soon to share further details and to complete the setup process. If you encounter any problems, e-mail feeds@zillow.com for assistance.

If you are submitting a rental listing feed for large multifamily properties (generally apartment communities with multiple vacancies), you should use the MITS or HotPads format and submit your feed following the instructions [here](#).

What communication protocols do you support?

We support HTTP and FTP protocols. If your feed is password protected, please contact us at feeds@zillow.com and we’ll set things up to maintain that security.

What kind of feed formats do you support?

We support three types of XML feeds:

- **ZIF (Zillow Interchange Format):** This is our own feed format that will allow you to create rich listings on Zillow. See the Zillow Interchange Format specification.
- **TFF (Trulia Feed Format):** If you have a feed set up with Trulia, you can use that same format for Zillow.
- **Syndication RETS:** We support the standard RETS syndication schema (found [here](#)).

Who do I contact in case something isn’t working correctly?

Please contact Zillow Customer Support via e-mail at feeds@zillow.com.

XML Guidelines

Some characters will not display as intended after the XML is parsed. There are two different methods you can use to ensure that your text is displayed correctly.

Entity Reference

To use any of the illegal XML characters (& , ' , < , > , "), please refer to the following table and replace any of these characters with the respective entity reference. An alternative to using entity references is to enclose the tag values inside a CDATA tag, which will be explained in the next section.

Character	Entity Reference	Description
&	&	Amperсанд
'	'	Apostrophe
>	>	Greater Than
<	<	Less Than
"	"	Quotation Mark

CDATA

Enclose tag values in a CDATA section, as described in the following table. Anything enclosed within these tags will not be parsed and will be displayed literally.

Begin CDATA section	<![CDATA[
End CDATA section	]]>
Example	<tag><![CDATA[This is a description & it contains "illegal" characters but that's okay because it's inside the CDATA tag]]></tag>

Case Sensitivity

In addition to ensuring that your XML is parsed correctly, it is also important to note that the ZIF elements and corresponding values are case sensitive. For example, <PropertyType>SingleFamily</PropertyType> will be accepted successfully, whereas <Propertytype>singlefamily</Propertytype> will not be.

Feed Format

By using the Zillow Interchange Format (ZIF), you can include as much detail about a home as you'd like. Obviously, the more information you can supply, the more attractive the home will be to a potential buyer.

The only fields required are property type, address (including unit number when applicable), contact e-mail and phone number, price, status, number of bedrooms (when applicable), and number of bathrooms (when applicable); all of these fields are shown in **bold** in the XML below. While these are the minimum requirements for each individual listing, feeds must have the ability to exceed those minimum requirements when the information is available by including photos, descriptions, and other details. Please note that Coming Soon listings have other requirements. Only feeds that include high quality listings will be accepted.

Element Specifications

Some of the elements are labeled “Multiples Allowed”. These elements can have multiple selections nested within them. For example, to specify that a property has both a mountain view and a water view, the XML would look like this:

```
<ViewTypes>
  <ViewType>Mountain</ViewType>
  <ViewType>Water</ViewType>
</ViewTypes>
```
